

## Automate, Protect and Monitor Your Clouds.

Embotics vCommander leverages a comprehensive set of multi-hypervisor virtualization and cloud management capabilities to allow organizations at any stage of cloud adoption to build and implement the framework, process, automation, and policies that will result in an optimized hybrid cloud environment.

Zerto Virtual Replication (ZVR) continuously protects the most aggressive applications and enables flexible data protection options. Whether it is between two or more on premise enterprise datacenters, public clouds like AWS and Azure, or a hybrid combination; Zerto protects and fully orchestrates the recoveries or migrations.

Agentless and designed for rapid, easy installation minimizing time to ROI, vCommander and ZVR are naturally complementary to each other efficiently overlaying seamlessly across your public, private and hybrid cloud infrastructure creating a single interface to automate provisioning and data protection and to monitor the status of your virtual machines.

### EMBOTICS AND ZERTO VIRTUAL REPLICATION INTEGRATION

#### BENEFITS

Now, for the first time, ZVR DR protection can be included as an option in both the vCommander self-service portal and through the API driven interface for some or all of your workloads. With a simple check box during provisioning.

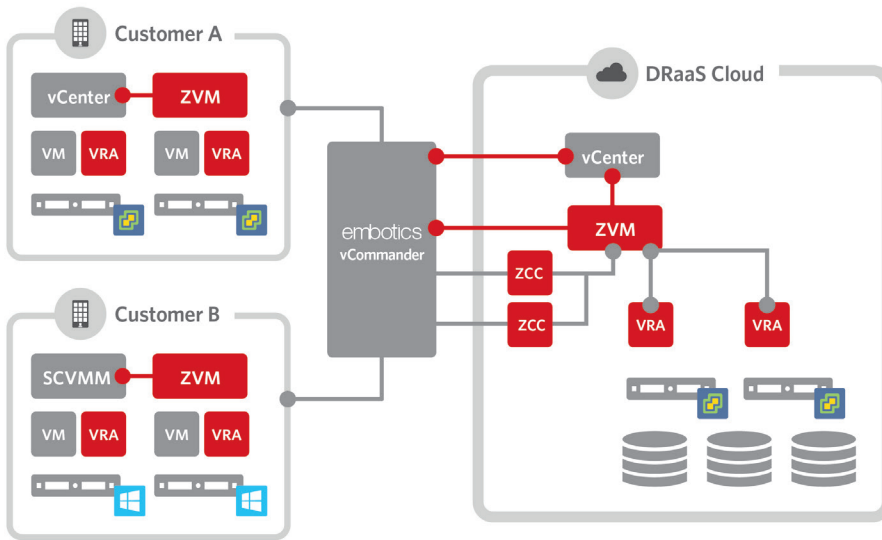

Through vCommander, VMs or groups of VMs that comprise an application can be DR protected through ZVR. This includes the ability to designate the Zerto VPG protection group, delivering the appropriate SLA for the workload category.

With the ZVR integration, vCommander will remove DR protection from VMs that have been orphaned, saving resources and costs at the alternate site.

With comprehensive resource management, cost evaluation and showback/chargeback capabilities Embotics gives you visibility into the relative costs of each type of Zerto Virtual Replication deployment and allows an enterprise to make a more analytical decision of which will be more cost effective for their needs.

- Management Network
- Replication Network

## USE CASES

### Test, Development and Production

- Automated provisioning
- Self-service IT portal
- Rightsizing Recommendations • Chargeback/showback
- Multi-cloud brokering
- REST API Integrations

### Hosting and Managed Service Providers

- Private label branding
- Remote access proxy
- Multi-tenancy

## ABOUT EMBOTICS

Embotics is the cloud automation company for IT organizations and service providers that need to improve provisioning or enable self-service capabilities. With a relentless focus on delivering a premier user experience and unmatched customer support, Embotics is the fastest and easiest way to automate provisioning across private/public/hybrid cloud infrastructures. Its flagship product, Embotics vCommander, is used by organizations including Nordstrom, NASA, Fanatics, Informatica and Charter Communications. For more information, visit [www.embotics.com](http://www.embotics.com).

## ABOUT ZERTO

In today's connected world, businesses need to be available to their customers, 24/7/365. Zerto provides Resilience for Evolving IT™, ensuring enterprises and their customers always have access to applications without any IT interruption, downtime or delay. Zerto's award-winning Cloud Continuity Platform, protecting thousands of enterprises worldwide, is the simplest, most reliable BC/DR software solution built to protect applications on any virtualized IT environment, be it public, private or hybrid cloud. Zerto's proactive approach to recovery gives companies confidence in their ability to withstand any disruption, incorporate new technology easily, and quickly adapt to accommodate evolving IT priorities.
